Build with Environment Friendly Boards

This sleek and modern wall-mounted vanity with a cultured marble top features two spacious cabinets with soft-close doors and an easy push-to-open system, providing convenient storage for your bathroom essentials. The vanity is also pre-drilled for a single-hole faucet, making installation easy.

This vanity is perfect for small bathrooms as it helps create a more spacious and open feel. It's also an excellent choice for those seeking a stylish and contemporary bathroom design.

White Oak

Ella's vanities are constructed using a collection of boards manufactured in Mexico by Arauco, the world's first Natural Carbon Certified forestry company. This certification signifies that, through its native forests and forestry plantations, Arauco captures more CO2 than it generates throughout the entire production process. Additionally, Arauco's products originate from sustainably managed forests certified by the FSC.

Environmentally friendly product.

The Arauco Melamine collection of boards features Virus Nano Protech protection. This technology, which utilizes copper nanoparticles, is capable of eliminating up to 99.9% of viruses and bacteria from the melamine surface after 60 minutes of contact and is effective against the virus that causes Covid-19*.

The product is certified to ISO 22196 for bacteria and ISO 21702 for viruses.

*Effectiveness studies were conducted on Human Betacoronavirus OC43, which is considered to be in the same family and subfamily as SARS-CoV-2.

The melamine surface of the vanities has a closed and pore-free composition, which makes cleaning and maintenance very easy. This quality also enhances their resistance to daily wear and tear.

Cleaning Recommendations

For daily or light cleaning of your Ella furniture, simply use a lightly dampened soft cloth to remove dust or surface dirt, and be sure to dry the surface afterward. For stubborn stains such as glue, paint, crayon, grease, varnish, or scale, consider the following options:

- Mix one tablespoon of bleach per liter of water, lightly dampen a soft cloth with this solution, clean your furniture, and then dry the surface to remove residue.
- Lightly dampen a cloth with a 50% alcohol + 50% water solution.
- Slightly dampen a cloth with thinner

Only in extreme cases will it be necessary to resort to cleaners that aid in this process. However, it is important not to overuse these cleaning agents or use them on a daily basis; their usage should be moderate and reserved for occasional use.

DO NOT USE

- ⊘ Caustic Soda
